

**California Health & Human Services Agency
Data Exchange Framework Technical Advisory Committee (TAC) Meeting
Q&A Log (12:00 PM – 1:00 PM PT, August 21, 2025)**

The following table shows comments that were entered into the Zoom Q&A by public attendees during the August 21, 2025, meeting:

Count	Name	Comment	Response(s) ¹
1	Ajay Prashar	Why are QHIO's missing from the two models? I have not attended recent meetings so I apologize for me not understanding.	live answered.
2	Mary-Sara Jones	Was 'centralized' a term used to refer to reusable services?	No. In this case, we are talking about a single service that all Participants use to
3	Susan Park, RN	Hello, apologies for a more off topic inquiry, however I am part of the Informatics team at Mammoth Hospital. For our facility, we are not required to start DxF until 1/31/26, and while I am going through the guide and consulting EHR reps (Cerner) to sign the DSA, I was wondering if, to your knowledge, CommonWell already meets requirements for DxF? I have emailed however still awaiting a response.	Susan - there are multiple distinct DxF Requirements - Commonwell may handle some, but to my knowledge not all today.
4	Lucy Johns	'@Michael: centralization in this slide applies only to Notice - not to other DxF functionalities. ;-) Is my understanding of this meeting.	That is correct. Thanks, Lucy.
5	Lucy Johns	Event notification is CMS requirement since 2021. Could	

¹ Responses may have been provided by various Data Exchange Framework Technical Advisory Committee Members, Guest Presenters, or Data Exchange Framework staff.

		someone update how this happens *now* in CA? Would this exercise *build* on that or become a new task for providers? This is response to David McC's comment about "cohorts," interesting concept.	
6	Ajay Prashar	Are Alerts and Events similar?	
7	Mary-Sara Jones	Will the architectures explore mechanisms to disclose only over lapping data as a means to comply with data sharing limitations? That would allow entities to see only those individuals relevant to them, for example the MCP would only see the HMIS rostered individuals who are also members.	
8	Lucy Johns	Question from consumer/patient: How does my name get onto a roster from my provider(s)? Does being on a roster imply consent? Privacy concern for sure. ;-)	
9	Lucy Johns	'@Hans: Thank you!! Roster per se doesn't seem to account for constraints on requests and/or release.	
10	Mary-Sara Jones	Belgium uses a push model that allows data to flow to the appropriate organizations without the need for rosters. It might be something to explore.	
11	Lucy Johns	Is there a reference that describes the Mass model?	
12	Mary-Sara Jones	'@Ray - the system in Belgium is not limited to healthcare. It	

		includes all government programs. A national identifier always makes it easier, but is not essential.	
13	Tina Schaible (NCHIIN)	Inquiring about the connection of our state work with the new national interoperability framework which includes Appointment and encounter notifications will be provided for outpatient, telehealth, ED, and inpatient encounters using FHIR subscriptions, where such notifications are permitted by existing law. - https://www.cms.gov/health-technology-ecosystem/interoperability-framework
